Rubicon Underground Mine Development

Underground diamond drilling across the Rubicon-Hornet-Pegasus complex continued during the quarter with three diamond rigs.

Resource definition drilling at Rubicon Central concentrated on lateral extensions to the Nugget lode mineralisation associated with the K2B structure in a similar position to the Poda at Pegasus. In addition, several drill holes targeting the footwall of Rubicon for potential new lodes near the White Foil Fault and drilling commenced from the northern-most available stockpile of the Exploration Decline at Rubicon South testing the depth extensions to the main K2 structure. At Hornet, drilling from the Exploration Decline targeted north and south extensions of Hornet K2 and adjacent hanging wall mineralisation.

Resource definition drilling programs at Pegasus Central continued targeting the northern extension of the Nugget lode adjacent to the current mining operations.

At the end of the quarter, the bottom of the Rubicon Decline is at 5833 m RL, 510 m from the surface, the bottom of the Hornet Decline is at 5711 m RL, 632 m from the surface, the bottom of the Exploration Decline is at 5664 m RL, 679 m from the surface, the top of the Pegasus Incline is at 6260 m RL, 83 m from the surface and the bottom of the Pegasus Decline is at 5837 m RL, 506 m from the surface.

EKJV Exploration

The Quarterly Report of the EKJV exploration activities was released to the ASX on 17 October 2017.

EKJV regional exploration for the quarter consisted of surface diamond drilling at Falcon, Papa Bear and Pegasus together with initial aircore drilling at the Montague prospect.

At Papa Bear, RC and diamond drilling tested an anomalous grade trend on the Kurrawang structure generated from previous aircore drilling.

A five-hole diamond drilling program at Falcon South, located 400m west of Pegasus and Drake prospects, targeted extensions to previous economic intercepts at Falcon.

Four underground diamond holes were drilled from Pegasus that have successfully defined the position of two key stratigraphic units within the Pegasus footwall zone.

At the Montague prospect located west of Raleigh, an initial geochemical drilling program was completed as a top-of-fresh geochemical survey over the Raleigh hanging wall stratigraphy immediately south of the deposit.

OTHER EXPLORATION

Mt Celia Project (Tribune's Interest 100%)

The drilling programme is nearly completed. Results will be announced when assays become available.

Seven Mile Hill Joint Venture (Tribune's Interest 50%)

The planned 10,000 m drilling programme has commenced.

WKJV (Tribune's Interest 24.5%)

There has been minimal activity as the bulk of the Exploration Budget is committed to approved and proposed EKJV exploration programmes.

Tribune Resources (Ghana) Limited (Tribune's Interest 100%)

The deep reverse circulation drilling programme has commenced targeting depth extensions to the current known gold bearing structures associated with the mineralisation of the Japa prospect.

The final approval of the statutory conversion of the Japa Prospect license to a Mining Licence is expected shortly.
